EDUCATION

San Jose State University

San Jose, CA

Bachelor of Science in Computer Science, GPA: 3.9

Graduation: December 2025

- Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Databases, Object-Oriented Programming, Computer Systems, Information Security

EXPERIENCE

Co-founder

Sept 2025 – Present

Nogic (developer-tools startup; backed by Fetch.ai, Founders Inc. alum)

San Francisco, CA

- Shipped a VS Code extension (**35,000+ installs**) and a GitHub App that generate codebase and pull-request walkthroughs.
- Wrote the FastAPI backend (Cloud Run, 13 REST/SSE endpoints) that routes requests across Claude models (Opus/Sonnet/Haiku by task) and prompt-caches static system prompts, cutting repeated input-token cost **~90%**.
- Built code retrieval over a symbol-level codebase graph: a custom BM25 ranker and LLM reranking feeding a 6-tool agent loop, plus a verification pass that re-checks each finding against a sandboxed repo checkout to catch hallucinations.
- Built nogic-ci, a TypeScript/Probot GitHub App that generates a walkthrough for each PR through a Cloud Tasks queue with idempotent workers, retries, and dedup; **18 test suites**.

Software Engineer Intern

Feb 2025 – Aug 2025

Fetch.ai (incl. Moderna collaboration)

San Francisco, CA

- Built a multi-agent health platform for **Moderna** with **uAgents** to analyze vaccine hesitancy across demographic, social-media, and voice data; 4 agents coordinated over REST APIs and chat protocols.
- Integrated Supabase (19 datasets), Qdrant for semantic search, and ASI1 LLM for query routing; deployed on Docker and Nginx with health checks, retries, and logging.
- Contributed to Fetch.ai's open-source **uAgents** library: refactored and extended the MCP adapter, fixed bugs, and added external-server integration.

Software Engineer Intern

Dec 2023 – Oct 2024

Jonajo Consulting

San Francisco, CA

- Built a full-stack widget on jonajo.com serving **25k+** users, backed by Firebase and MongoDB.
- Cut infrastructure cost **80%** vs. AWS EC2 by moving to TensorDock with CI/CD (GitHub Actions), and LLM compute **50%** with Llama/HuggingFace.

PROJECTS

LandDrop | Hack for Social Impact 2024 Winner | FastAPI, Next.js, uAgents, Azure, Mapbox

- Land-analysis tool that uses **uAgents** to assess land degradation and socioeconomic impact, with interactive mapping and a chatbot; recognized by UN-affiliated judges.

Databae | CalHacks 2024 Award Winner | Next.js, MySQL, Python, FastAPI, Groq, uAgents

- Database assistant that turns natural language into SQL with **uAgents** and Groq's LLaMA; Next.js/Shadcn frontend returning plaintext or Pandas output.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Go, SQL, Java, C++, Bash

Frameworks: FastAPI, Node.js, Express.js, React.js, Next.js, Flask, LangChain, LangGraph, uAgents, Tauri

Tools: Docker, Kubernetes, Terraform, GCP, AWS, Azure, CI/CD, Git, MongoDB, Supabase, Nginx, Linux/Unix
